aditya752@gmail.com / aditya752@outlook.com

Highly experienced Data Engineer with 7+ years of expertise in designing, developing, and implementing robust data pipelines and ETL processes. Proven ability to leverage Databricks, PySpark, and other data warehousing technologies to deliver efficient solutions that meet critical business needs. Adept at data manipulation, cleansing, and modeling, transforming complex datasets into actionable insights. Currently focused on building and optimizing data pipelines for predictive maintenance anomaly detection within the Azure Databricks environment. Collaborative team player with a strong track record of success in agile environments.

EXPERIENCE

Vanderlande, *Data Engineer*

December 2023 - Present

- Lead contributor to the DSP Predictive Maintenance anomaly detection team, developing and maintaining data pipelines for critical in-house products (Adapto, Conveyor Health, Divert Health, and Carrier Health).
- Significantly improved the robustness and flexibility of the end-to-end pipeline, streamlining the integration of new assets for anomaly detection and predictive maintenance through enhanced configuration and reduced code changes.
- Extensively utilized **Azure Databricks**, **MLflow**, and **Bamboo for CI/CD pipelines**, along with **Python**, **PySpark**, **Unity Catalog**, and **Delta Live Tables (DLT)**.
- Designed and implemented end-to-end data pipelines and ETL processes for the anomaly detection pipeline.
- Established monitoring and alerting systems for automated data pipelines and workflows within Azure.
- Collaborated effectively with cross-functional teams to ensure seamless data ingestion and delivery of daily results to various applications.

OnDemand Agility/ COFORGE, *Software Engineer*

December 2021- December 2022

- Designed and implemented data pipelines for FRTB (Fundamental Review of the Trading Book) regulations for investment banking clients.
- Developed a lightweight application for threshold breach detection and analysis, enabling rapid identification of breach causes.
- Created a user-friendly mechanism for accessing data at any hierarchical level, facilitating in-depth analysis of breaches and anomalies.

Mastersoft ERP, *Software Engineer*

December 2020 - December 2021

- Designed and implemented cost-efficient solutions to address complex business challenges.
- Researched, designed, and developed scalable solutions using a microservices architecture.

LANGUAGES

English, Marathi, Hindi,
Kannada

Education

Walchand institute of technology,
Solapur, Maharashtra — B.E.
Computer Science, 2017.

SMV jr. college,
Computer Science
2012

SKILLS

Programming Languages:

- Python, Core Java.

Frameworks and libraries:

- Flask, PySpark,
TensorFlow, Scikit-learn, OpenCV.

Data Warehousing
ETL

- Delivered vision, NLP, and analytics-based solutions for EdTech applications.

Sears IT and management, *Technical Associate*

October 2017 - August 2020

- Developed data warehousing, automation, and analytics solutions for internal financial applications.
- Maintained, debugged, and optimized code for production readiness and integrated new solutions as required.
- Collaborated with senior team members to ensure seamless migration of financial applications, scripts, and jobs.

Professional Contributions:

Predictive Maintenance - Anomaly detection:

- Designed and implemented end to end data pipelines and ETL processes for Anomaly detection pipeline
- Set up monitoring and alerting for automated data pipelines and workflows in azure.
- Collaborated with other teams for getting the raw data in the application as expected and also sending the results generated in daily run to different applications

FRTB threshold breach detection and analysis:

- Provided an interface for end user to upload input template to apply threshold breach detection at required hierarchical level
- Connected with required endpoints and built runtime queries for multiple entities on required COB dates, detect threshold breaches and provide data for breach drill down and analysis.

Live Video analysis and monitoring:

- Translate product requirements into analytical requirements, design, develop and deploy required functionality. Built API to monitor live video feed and display processed images with anomalies.

Rule based Chatbot for different client websites and applications::

- Involved in data preprocessing techniques to make data useful for creating required models. Built microservices for chatbot applications in collaboration with the frontend team to cater different client requirements at run time.

Face recognition for attendance system:

- Built face recognition Api to be integrated with web and mobile applications for face recognition.

Assembly line automation with the help of template matching:

- Assembly line anomaly detection with help of computer vision and python libraries.
- Built and integrated with Siemens PLC for passing signals.

Optical character recognition for document scan and reading:

- Character recognition on assembly line with help of computer vision and python libraries.
- Built and integrated with Siemens PLC for passing signals

ETL and data warehousing:

- Worked on jobs for Datastage to Pentaho migration.
- Worked on writing structured stream service and one time data load jobs using Spark SQL.

Databricks

Database:

- SQL, NoSQL

Developer Tools:

- PyCharm, Eclipse.

Bug Tracking tool:

- Jira.

Version control tool:

- GitHub, SVN.

Operating Systems:

- Windows, Linux.

Cloud Platforms:

- Azure, AWS
